The PRE5901 Programming handset has been designed to allow facility managers to select times and temperatures and install these programs simply, securely and quickly by the press of a button.

Once the setting parameters have been programmed into the handset it is a simple task to point the handset at the thermostat and "send" the parameters. The ecostat2 heating range and various lighting controls (Please see table below for compatibility) are programmed by this convenient and very secure method. Unique IR coding avoids the possibility of unauthorised tampering with settings whilst management can adjust the settings at any time.
