- Indicators - Full colour LCD display
- Real-time clock
- Intuitive operation plus user help menus
- Up to 5 metre Infrared range
- Protective silicone sleeve
- 5-year warranty

### Near Field Communication

Antenna Locations

Placement for transmission

The PRE5904 Programming handset has been designed to allow facility managers to select time and temperature parameters and install programmes simply, securely and quickly with intuitive operation, easy to use menu and large display screen.

When the setting parameters have been programmed into the handset it is a simple task to point the handset at the thermostat and 'Send' the parameters.

Compatible products are programmed by this convenient and very secure method. Unique IR coding avoids the possibility of unauthorised tampering with settings while management can adjust the settings at any time.

Near Field Communication enables controls to be programmed without the need to be powered. Close contact, similar to contactless credit card transactions, transfers data from handset to control unit.
